

Our environmental responsibility.

Energy and Emissions

- Sustainability is built into the way we operate, with energy-saving technologies and practical initiatives ranging from on-site solar power to highly efficient air source heat pump systems and sensed LED technology
- Our Basingstoke facility is now Zero Scope 2 Carbon meaning by 2026 we have achieved 100% renewable energy usage at our Basingstoke Facility – 2 years ahead of schedule
- Investing in projects that reduce or capture CO2 emissions.
- Fully electric vehicle fleet across the business
- we encourage bio-diversity in our outside green spaces

Waste Management

- Reducing waste to landfill by 20% each year from 2025 base.
- 100% of greywater used in the building is harvested rainwater

Packaging

- Working with our customers and suppliers to develop & deploy sustainable packaging solutions
- We bale our cardboard waste which has significantly reduced the required number of lorry collections

This approach is embedded in our Basingstoke HQ, where renewable energy, smart building systems and sustainable infrastructure support lower-carbon manufacturing
